

SUI DeFi 101

DeepBookV3 - The Backbone of Sui DeFi Liquidity

What is DeepBookV3?

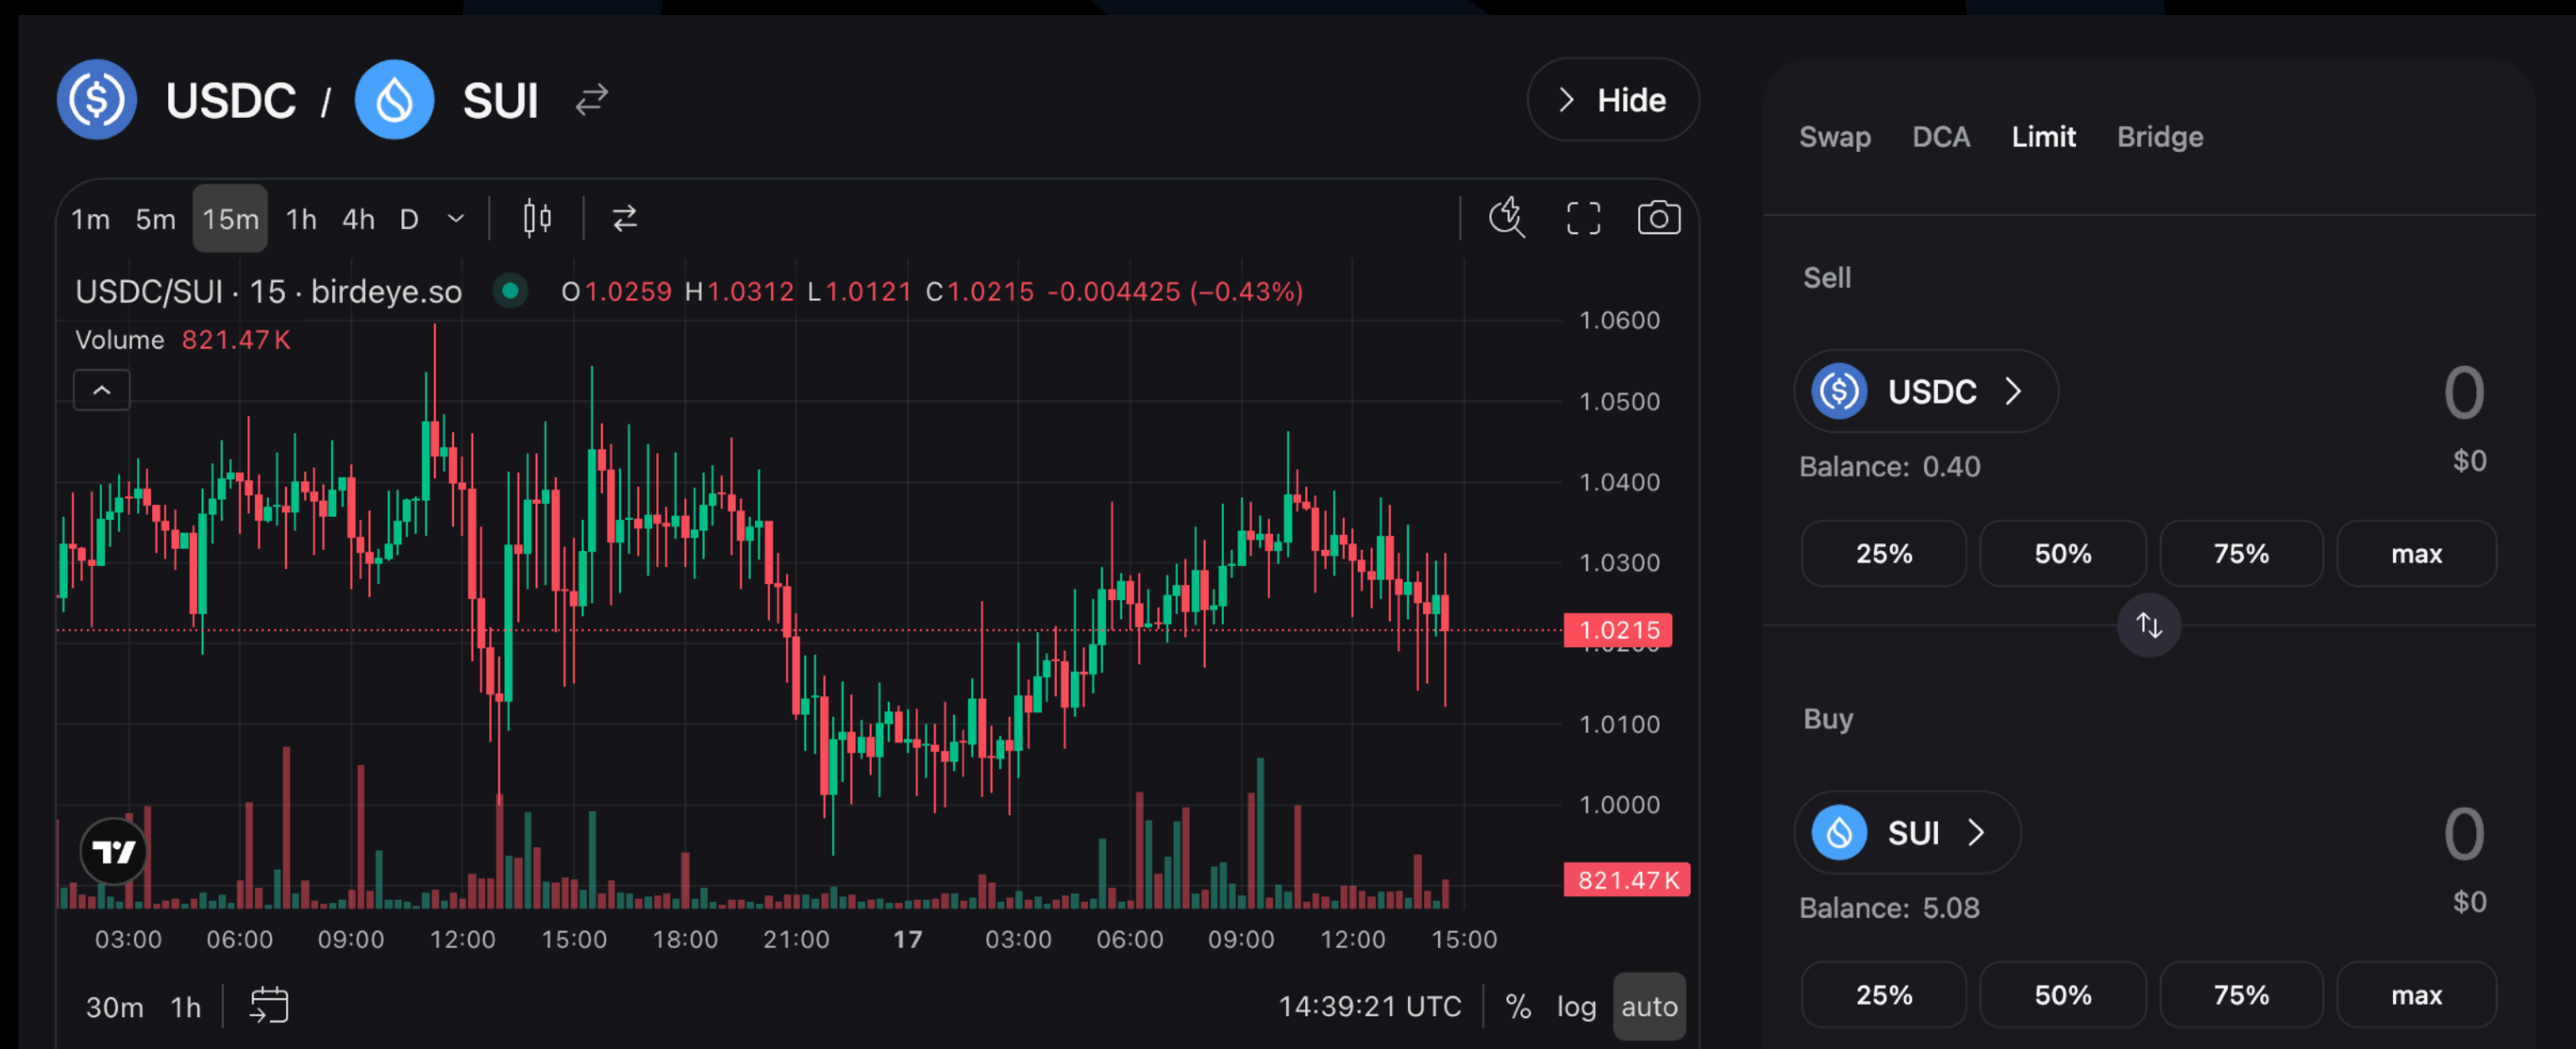

Next-generation decentralized central limit order book (CLOB) built on Sui.

DeepBookV3 leverages Sui's parallel execution and low transaction fees to bring a highly performant, low-latency exchange on chain

What is CLOB?

Trading system where users place buy and sell orders at specific prices, and trades occur when matching prices are found

- Bids → Buy orders (what buyers are willing to pay)
- Asks → Sell orders (what sellers want)

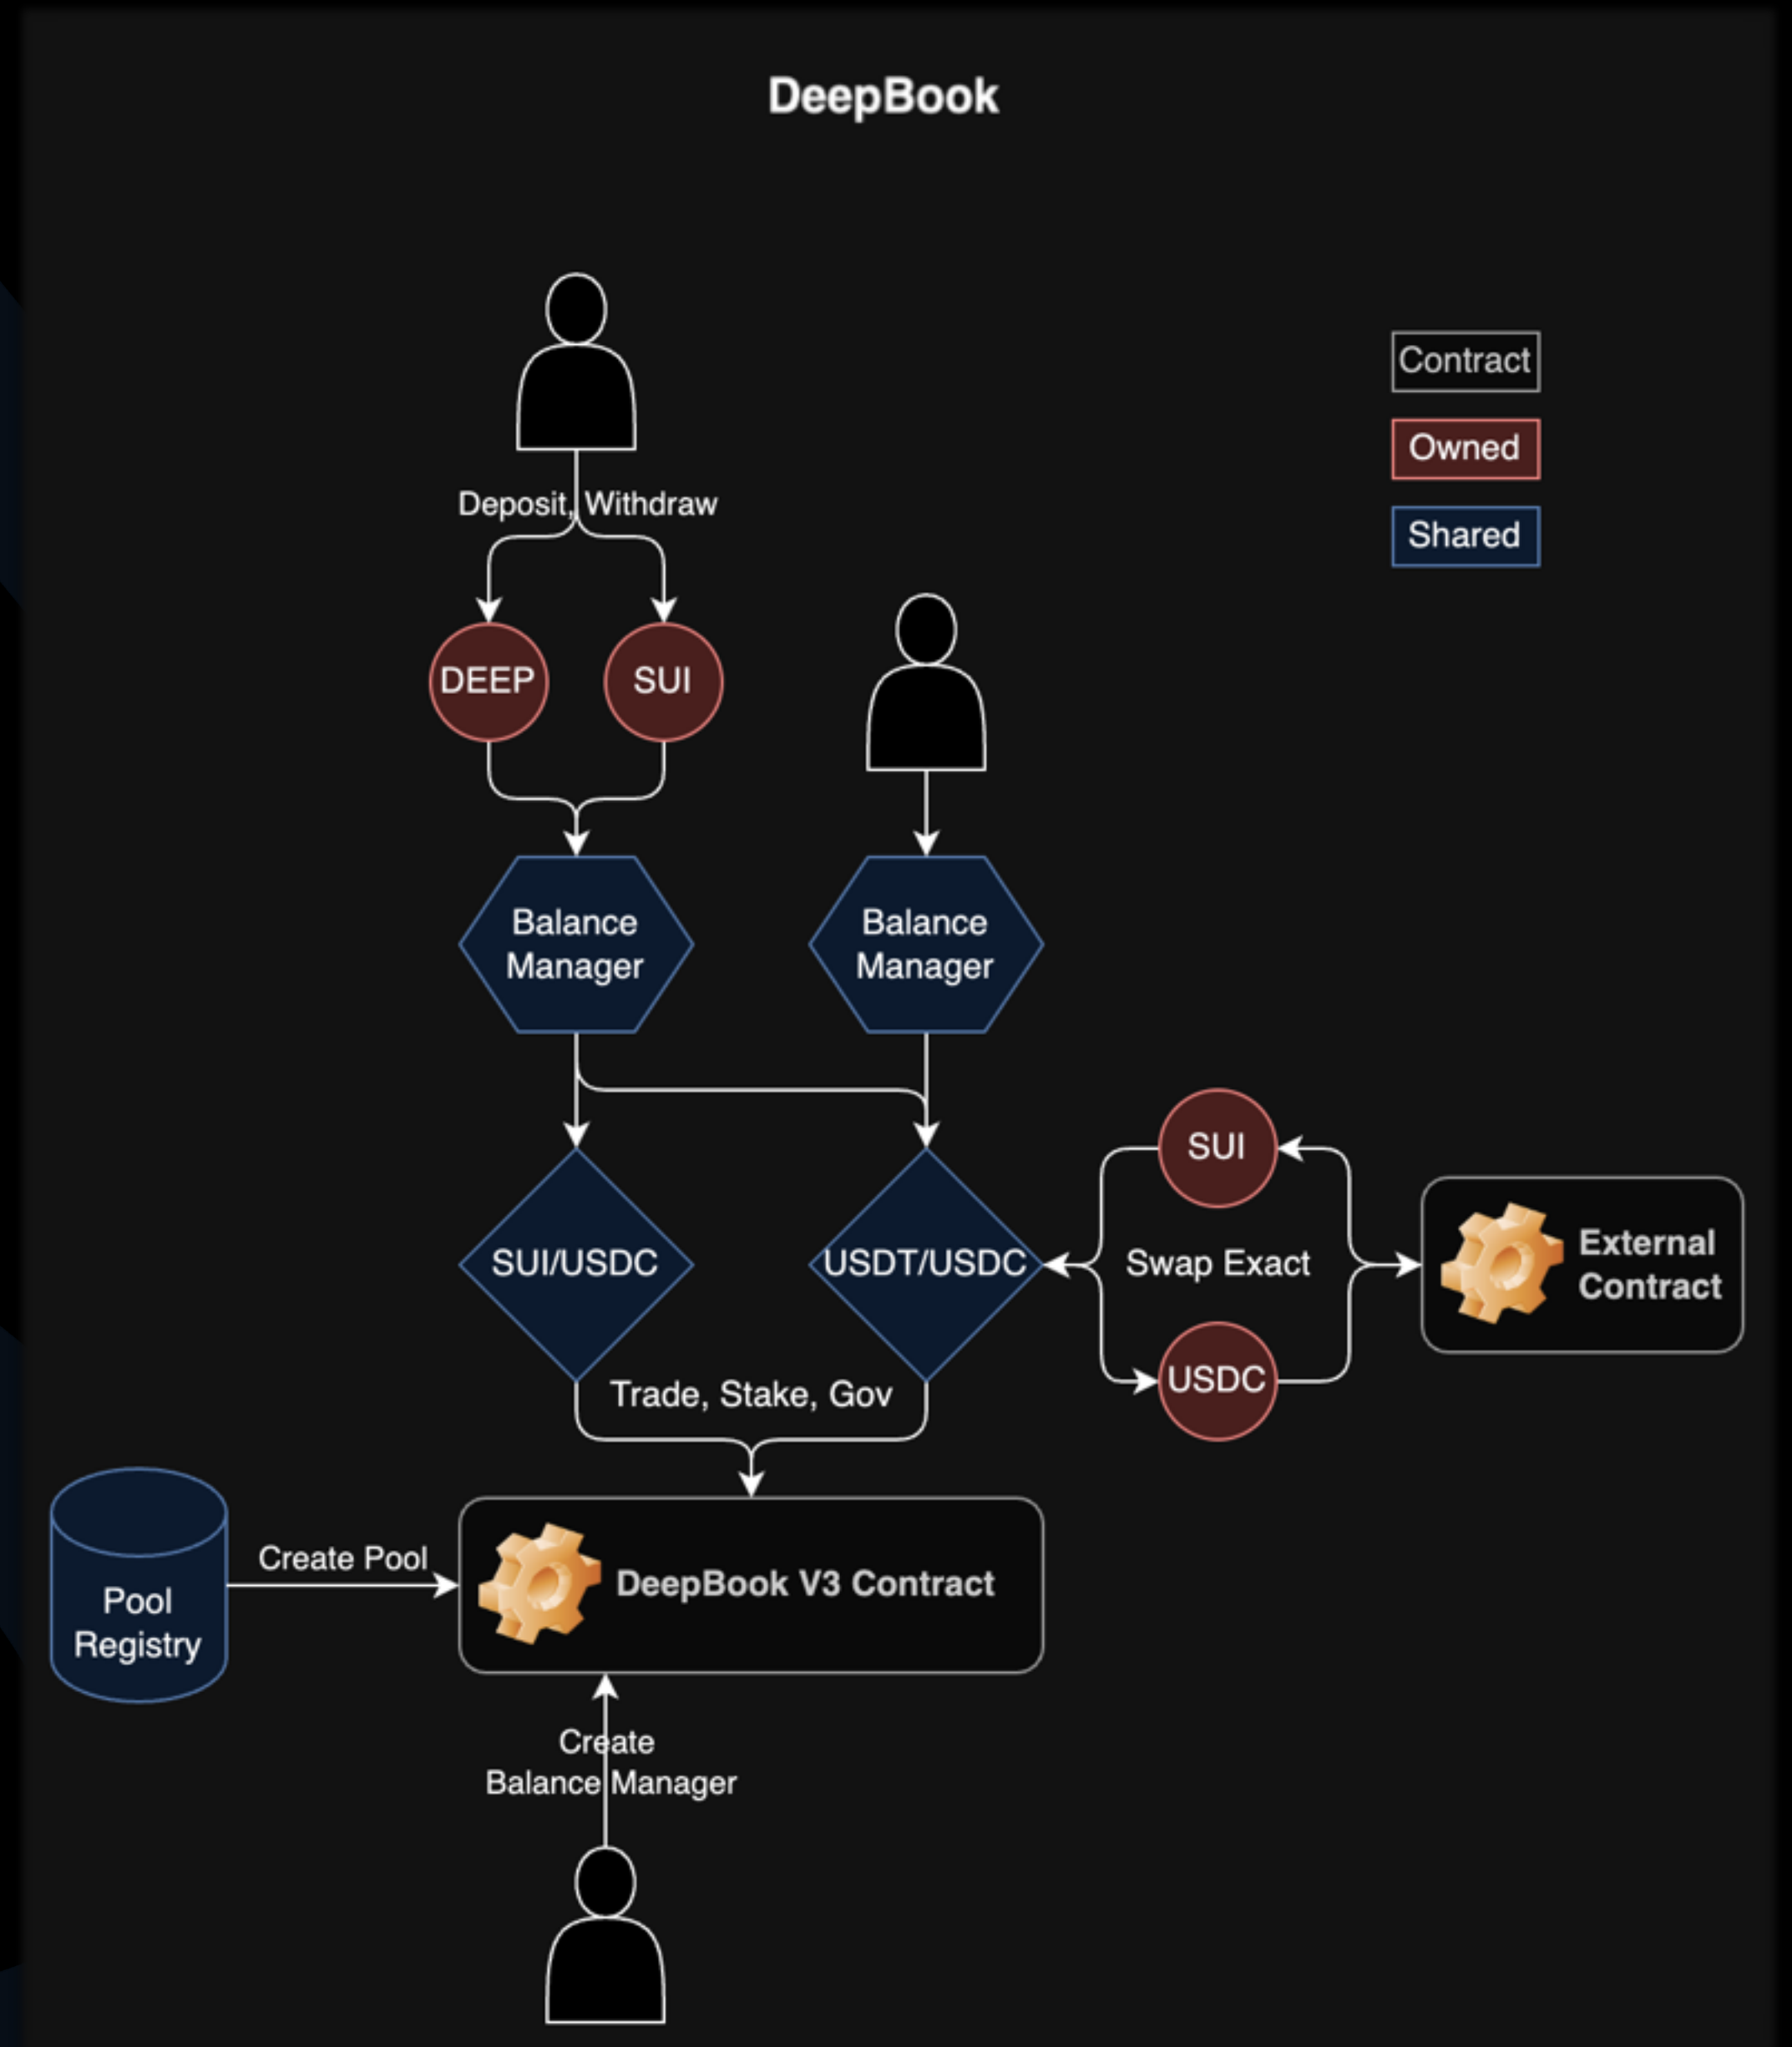

DeepBookV3 Features

- *Fully on-chain CLOB with high-performance matching*
- *Shared liquidity layer across multiple protocols*
- *Permissionless and composable trading infrastructure*
- *Balance Manager for efficient capital management*
- *Flash loans for atomic arbitrage and liquidations*
- *SDK and primitives for bots, MM, and DeFi integrations*

DeepBookV3 Cores

- *Pools is the on-chain market where orders are matched and trades are executed.*
- *BalanceManager is your trading wallet inside DeepBook*
- *PoolRegistry is the on-chain directory that manages and validates DeepBook markets*

Order functions

- *Limit order — Place an order at a specific price and wait for a match.*
- *Market order — Execute immediately at the best available price.*
- *Cancel order — Cancel a specific open order.*
- *Cancel all orders — Remove all open orders in a pool.*
- *Modify order — Update price or quantity of an existing order.*
- *Swaps (AMM) — Instantly trade via liquidity pools without using the order book.*
